**Note:** Submitting a report to VAERS does not mean that healthcare personnel or the va the adverse event (possible side effect).

**Notes:**

**Caveats:** VAERS accepts reports of adverse events and reactions that occur following vaccine manufacturers, and the public can submit reports to VAERS. While very important for safety, VAERS reports alone cannot be used to determine if a vaccine caused or contributed to an illness. The reports may contain information that is incomplete, inaccurate, and coincidental. Reports to VAERS are voluntary, which means they are subject to biases. This creates the data can be used scientifically. Data from VAERS reports should always be interpreted with care in mind.

The strengths of VAERS are that it is national in scope and can quickly provide an early warning of a problem with a vaccine. As part of CDC and FDA's multi-system approach to post-market monitoring, VAERS is designed to rapidly detect unusual or unexpected patterns of events, called "safety signals." If a safety signal is found in VAERS, further studies can be done through CDC's Vaccine Safety Datalink (VSD) or the Clinical Immunization Safety Assessment (CISA) systems do not have the same limitations as VAERS, and can better assess health risks between adverse events and a vaccine.

Key considerations and limitations of VAERS data:

- Vaccine providers are encouraged to report any clinically significant health events to VAERS, whether or not they believe the vaccine was the cause.
- Reports may include incomplete, inaccurate, coincidental and unverified information.
- The number of reports alone cannot be interpreted or used to reach conclusions about severity, frequency, or rates of problems associated with vaccines.
- VAERS data are limited to vaccine adverse event reports received between 1990 and 2021 for which data are available.
- VAERS data do not represent all known safety information for a vaccine and do not include the context of other scientific information.

Some items may have more than 1 occurrence in any single event report, such as Manufacturer, Event Category, and Event Categories. If data are grouped by any of these items, the Reported column may exceed the total number of unique events. If percentages are calculated, the percentage of total unique event reports will exceed 100% in such cases. For example, the number of events reported is likely to exceed the number of events reported, because many reports include multiple symptoms. When more than 1 Symptom occurs in a single report, then the percentage of total unique events is more than 100%. [More information.](#) ([/wonder/help/vaers.html#Suppress](#))

Data contains VAERS reports processed as of 3/19/2021. The VAERS data in WONDER receives continuous updates including revisions and new reports for information. ([/wonder/help/vaers.html#Reporting](#))
